DETAILED ACTION

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 33 and 36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With respect to claim 33, "the channel" lacks antecedent basis. With respect to claim 36, "said cutting wire" lacks antecedent basis.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-4, 9, 12-17, 21, 23-27, and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Weaver et al. (5,599,300). Weaver et al. disclose, in figures 4 and 34-36 and in col. 19, lines 11-66, an apparatus, a catheter handle (202), or a catheter (12), and a method of cutting tissue in a body passage, where the catheter has proximal and distal ends and first or guidewire and second lumens (32, 34) and an electrosurgical cutting wire (206), where the handle engages and rotates the proximal end of the cutting wire (about its axis during assembly) and has a clamping member

Application/Control Number: 10/003,678

(221), and an endoscope (36).

Art Unit: 3731

(224) for the cutting wire, a rotatable coupling (14, see also col. 19, lines16-20) attaching the handle to the catheter, a locking mechanism (209), rotation lock(17, a threaded luer lock hub according to col. 19, lines 52-60), a rotation indicator or a visual indicator of handle rotation (distal surface portion of 17), a second locking mechanism

5. Claims 31, 32, and 36-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Nita et al. (5,342,292). With respect to claims 31, 32, and 37, Nita et al. disclose, in figures 2-12a, a catheter (12) and a method for its use in positioning a cutting device, where the catheter and method include a guidewire lumen (14), a cutting device (20, 22), first and second openings (13) through the catheter wall, and a locking mechanism (140a, b, or c) for locking an orientation of the distal portion of the cutting device, and a second locking mechanism (210, 212). With respect to claims 38-41, Nita et al., in figures 5, 6, 8a, and 12a, a catheter with a thinned exterior wall adjacent the guidewire lumen (14b), a first opening into the guidewire lumen (13), a cutting device (22) with cutting wire (20), a handle (146) locking mechanism (140a or b), a rotation indicator (concavity 142c, which prevents rotation of the handle when it is positioned in the concavity), and a second locking mechanism (210, 212).

Allowable Subject Matter

6. Claims 5-8, 10, 11, 18-20, 22, 28, 29, 34, and 35 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in

Page 3

Application/Control Number: 10/003,678

Art Unit: 3731

independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record, alone or in combination, discloses an apparatus having, inter alia, a catheter, a cutting wire, a catheter handle for the cutting wire, a rotatable coupling attaching the handle to the catheter, a locking mechanism for locking an orientation of the distal portion of the cutting wire, and a handle rotation indicator; and a method for use of the apparatus, where rotation of the handle relative to the proximal end of the catheter is indicated audibly or with an index marking and a corresponding scale marking, where the locking mechanism includes an insert for resisting movement between moving parts of the apparatus or of a guidewire, and where the locking mechanism or a second locking mechanism includes evenly-spaced detents.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nita et al. (5,957,882) teach a catheter with a guidewire lumen.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian W. Woo whose telephone number is (703) 308-0421. The examiner can normally be reached Mon.-Fri., 7:00 AM to 3:00 PM Eastern Time, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael J. Milano can be reached at (703) 308-2496.

General inquiries relating to the status of this application should be directed to the Group receptionist at (703)308-0858. The FAX number is (703)872-9306.
